CONTROL AND ERADICATION OF TUBERCULOSIS IN CATTLE

List of Herds Officially Accredited As Free From Tuberculosis,
And of Herds That Have Passed Successfully One Test
With a View to Certification

116.2-3
A7842
142-144

CONTROL with a view to the eventual eradication of tuberculosis in cattle is being accomplished by systematic efforts of Federal and State authorities in cooperation with cattle breeder's associations and herd owners.

A definite plan was adopted in 1917 whereby herds of cattle passing the prescribed number of official tuberculin tests should be certified or accredited as free from tuberculosis.

An accredited herd is one that has successfully passed two annual or three semiannual tuberculin tests applied by regularly employed veterinary inspectors of the Bureau of Animal Industry or of the State where cooperative work is conducted, and has otherwise complied with the regulations governing the work.

The work has been in progress long enough to justify publication of the results. The following list shows herds accredited to date, together with those that have passed successfully one test without reactors with a view to certification. If the status of any of the accredited herds on this list is changed, prompt notice of the fact will be furnished to the officials of the various States.

The different breeds of cattle and the names of the owners are arranged in alphabetical order. Additional lists will be published from time to time.

LIST OF HERDS OFFICIALLY ACCREDITED AS FREE FROM TUBERCULOSIS, AND OF HERDS THAT HAVE PASSED SUCCESSFULLY ONE TEST WITH A VIEW TO CERTIFICATION.

The herds under the heading "Accredited" are those accredited by the State officials and the United States Department of Agriculture as free from tuberculosis. Those under the heading "Once tested without reactors" have passed successfully one official tuberculin test. A large number of other herds have been tested officially, but as one or more reacting or suspected animals were found in each of them, such herds do not appear in the list. If upon later tests the herds are found to be free from tuberculosis they will appear in subsequent lists.

ABERDEEN-ANGUS.

UNIFORM METHODS AND RULES FOR TUBERCULOSIS-FREE ACCREDITED HERDS OF PURE-BRED CATTLE.

Unanimously Adopted by the United States Live Stock Sanitary Association and by Representatives of Pure-Bred Cattle Breeders' Associations, and Approved December 23, 1917, by the United States Bureau of Animal Industry.

1. A tuberculosis free accredited pure-bred herd is one which has been tuberculin-tested by the subcutaneous method, or any other test approved by the Bureau of Animal Industry, under the supervision of the Bureau of Animal Industry, or a regularly employed veterinary inspector of the State in which cooperative tuberculosis-eradication work is conducted jointly by the United States Department of Agriculture and the State. Further, it shall be a herd in which no animal affected with tuberculosis has been found upon two annual or three semiannual tuberculin tests, as above described, and by physical examination.

2. The entire herd, or any cattle in the herd, shall be tuberculin-tested or retested at such time as is considered necessary by the Federal and State authorities.

3. No cattle shall be presented for the tuberculin test which have been injected with tuberculin within 60 days immediately preceding or which have at any time reacted to a tuberculin test.

4. No herd shall be classed as an accredited herd in which tuberculosis has been found by the application of the test, as referred to in paragraph 1, until such herd has been successfully subjected to two consecutive tests with tuberculin, applied at intervals of not less than six months, the first interval dating from the time of removal of the tuberculous animal from the herd.

5. Prior to each tuberculin test satisfactory evidence of the identity of the registered animals shall be presented to the inspector. Any grade cattle maintained in the herd, or associated with animals of the herd, shall be identified by a tag or other marking satisfactory to the State and Federal officials.

6. All removals of registered cattle from the herd, either by sale, death, or slaughter, shall be reported promptly to the said State or Federal officials, giving the identification of the animal and, if sold, the name and address of the person to whom transferred. If the transfer is made from the accredited herd to another accredited herd, the shipment shall be made only in properly cleaned and disinfected cars. No cattle shall be allowed to associate with the herd which have not passed a tuberculin test approved by the State and Federal officials.

7. All milk and other dairy products fed to calves shall be that produced by an accredited herd, or, if from outside or unknown sources, it shall be pasteurized by heating to not less than 150° F. for not less than 20 minutes.

8. All reasonable sanitary measures and other recommendations by the State and Federal authorities for the control of tuberculosis shall be complied with.

9. Cattle from an accredited herd may be shipped interstate, by certificate obtained from the office of the State live stock sanitary officials of the State in which the herd is located or from the office of the Bureau of Animal Industry, without further tuberculin test for a period of one year, subject to the rules and regulations of the State of destination.

10. Strict compliance with these methods and rules shall entitle the owners of tuberculosis-free herds to a certificate, "Tuberculosis-Free Accredited Herd," to be issued by the Bureau of Animal Industry and the State live stock sanitary authority. Said certificate shall be good for one year from date of test unless revoked at an earlier date.

11. Failure on the part of owners to comply with the letter or spirit of these methods and rules shall be considered sufficient cause for immediate cancellation of cooperation with them by the State and Federal officials.
